

I think that it is a disheartening to know that xm satellite is being challenged by the monopoly of NAB. Since the monopoly can't control XM, they wish to do everything they can to stop it. I think it is unmentionable that the NAB even brought this argument to light. Capitalistic greed is what it sounds to me by the NAB. Why don't they pout in the corner instead. I feel that XM should be able to carry local weather, and even expand it. If the NAB wants to do something, maybe take training from XM and cut down on all of the commercials and start playing real music. I want to hear music on the radio, not 25 minutes of commercial or some jock that thinks hes cool by demeaning everyone. Let XM continue with local weather stations and assist them in expanding it. At least I can hear the weather and local road conditions. Not the latest viagra commercial. Since I pay for this service to not have commercials and the right to listen, the NAB can ?????
